Education

University of British Columbia Sep. 2022 – Apr. 2027
Bachelor of Science in Computer Science, Minor in Data Science *Kelowna, BC*

GPA: 4.00/4.33 | Co-op Designation | Dean's List | Deputy Vice-Chancellor Scholarship | Directed Studies Student

Leadership: Computer Science Course Union: VP-Events (2026–27) | Coding Club: Vice President (2024–25)

Experience

NB Power – Point Lepreau Nuclear Generating Station May 2025 – Aug. 2026
Software Engineer Co-op *Hybrid | Maces Bay, NB*

- Standardized **10+** applications by introducing a custom reusable component framework with **JavaScript** and **jQuery**, reducing **850+** lines of boilerplate code and simplifying the rollout of new products.
- Developed and integrated a full-stack web application using **OpenText Web** and **Live Reports**, reducing workflow completion time by over **50%** while improving data quality for trend analysis.
- Managed end-to-end delivery in an **Agile/Kanban** workflow, deploying **30+** software upgrades through DEV, QA, and PROD environments.
- Owned feature development for performance monitoring software supporting **500+** new records monthly.
- Resolved data-overwrite issues by engineering a global **single-session management system**.
- Built an executive reporting dashboard for the Station Vice President using **Highcharts.js** and **Bootstrap** to track management coaching activities across **5** key metrics.

Projects

UBC Courseplanner Web App | *TypeScript, React, Remix, MySQL*

- Engineered **20+** CRUD operations across **10+** Remix loaders/actions with robust error handling.
- Designed and maintained relational database schemas using **Prisma ORM** to support scalable data storage.
- Delivered **4** major features across the application, including transcript parsing, landing dashboard, centralized logging with **Winston**, and an end-to-end bug reporting system.
- Collaborated in a **3-person development team** using **GitHub** to deliver production-ready features for an application now deployed on **UBC servers**.

Mock Bank API | *Go, PostgreSQL, Docker, GitHub Actions*

- Engineered a RESTful API using **Gin**, securing routes with **JWT** and **PASETO** authentication, **bcrypt** password hashing, and authorization middleware.
- Built atomic money transfers with consistent lock ordering to prevent deadlocks, verified with concurrent **goroutine** tests under **50+** simultaneous transfers.
- Wrote unit tests for HTTP handlers against a mocked database layer using **gomock** with a custom matcher.
- Configured a **GitHub Actions** CI pipeline running **PostgreSQL**-backed tests and multi-stage **Docker** builds.

High Noon Optimist Club Website | *Next.js, TypeScript, Supabase, Vercel*

- Delivered a responsive, full-stack website for a paid client, developing a custom **CMS** using **Next.js**, **TypeScript**, and **Supabase**, deployed through **Vercel**.
- Implemented **10+** reusable **React** components to improve code consistency and simplify feature development.
- Reduced ongoing maintenance requests to **<1 per month** by designing user-friendly content management workflows enabling the client to independently update website content.
- Ranked in the **top 3 Google search results** for targeted keywords by adding page **SEO metadata** and registering the site with Google.

Technical Skills

Languages: C#, Java, Go, HTML/CSS, JavaScript, Python, R, SQL, TypeScript
Frameworks/Libraries: Bootstrap, FastAPI, Gin, jQuery, Node.js, Next.js, Prisma, React, Remix, Tailwind
Databases & Tools: Docker, Git, GitHub Actions, MySQL, PostgreSQL, Postman, SQLServer, Supabase, Vercel
