EDUCATION

University of British Columbia

Bachelor of Science in Computer Science, Minor in Data Science

GPA: 4.00/4.33 | **Coding Club Okanagan:** Vice President (2024–25)

Sep. 2022 – Apr. 2027

Kelowna, BC

EXPERIENCE

NB Power

Software Engineer Co-op

May. 2025 – Aug. 2026

Hybrid | Maces Bay, NB

- Integrated **OpenText Web** and **Live Reports** to build **2** new full-stack web apps onto existing infrastructure.
- Designed and led a reusable component framework with **JavaScript** and **jQuery**, cut **850+** lines of boilerplate code across **10+** internal applications, simplifying the rollout and creation of new tools.
- Collaborated with customers for user-feedback **biweekly** to gather requirements and achieve **100%** of milestones.
- Managed end-to-end feature delivery in an **Agile/Kanban** workflow, deploying **20+** software upgrades through DEV, QA, and PROD environments while prioritizing and resolving critical user-reported issues.
- Product owner responsible for maintenance on software used plant-wide storing **500+** records per month.

Freelance

Web Developer

Apr. 2025 – Mar. 2026

Remote | Regina, SK

- Delivered web solutions to **2** clients, by building custom full-stack web apps using **NextJS** with **Typescript**, **React** and **Supabase** to support **500+** monthly visitors.
- Minimized maintenance requests to **< 1 per month** by building user-first content management into products.
- Reduced redundant server requests by approximately **40%** by implementing caching for high-traffic data endpoints, resulting in near-instant page loads and improved user experience.

University of British Columbia

Software Engineer - Team Member

Jan. 2025 – Apr. 2025

Remote | Kelowna, BC

- Engineered **20+** CRUD ops across **10+** Remix loaders/actions with error handling to achieve **0** runtime errors.
- Collaborated in a **3-person team** developing a course planning web app using **Typescript**, **Remix** and **PrismaORM** as coursework under professor supervision, achieving a **94%** final grade based on project delivery.
- Implemented **Node.JS** logger across app to capture **100%** of backend server crashes, enabling **instant debugging** via a unified dashboard.

PROJECTS

Crypto Paper Trader | *Typescript, React, Express, Postgres, Docker*

- Utilized Coinbase's WebSocket feed and **Socket.io** to simulate real time trading on **10+** cryptocurrency's, allowing users to perform simple transactions on crypto with **no monetary risk**.
- Architected **REST API** and custom middleware in **Express**, validating **100%** of requests to the server with **JWT-based authentication** to ensure secure data trading operations.

Automated Notifier CLI | *Golang, SQLite*

- Created a **Go** CLI reminder system with background daemon service, enabling **100%** persistent scheduling across reboots and delivering native macOS notifications with **<10s** accuracy.
- Engineered a concurrent scheduler using **goroutines**, channels, and **SQLite**, achieving **<1%** CPU usage while supporting **100+** simultaneous reminders and automatic cleanup of completed events.

TECHNICAL SKILLS

Languages: Java, Python, SQL, Golang, JavaScript, HTML/CSS, Typescript

Libraries/Frameworks: React, Node.js, Express, Tailwind, Bootstrap, JQuery, ShadCN, Remix, NextJS, Socket.io

Developer Tools: Chrome DevTools, Docker, Git, GitHub, Vercel, Render.io
